

## Scott (written by his mom, Juli)

Scott was born 2 months premature in February of 2009. He was diagnosed with cerebral palsy at 1 year of age. His cp affects him primarily physically. He is a fun loving and joyful kid.

Conductive Education program gives Scott the confidence to try new things. He loves the encouragement he receives as therapy and his parents love seeing him feel confident enough to try things out at home.

The affordability of CFCE's program cannot be beat. They provide a very attentive level of care for a price that does not even compare to the quality received.
